

NIV KOREN SASI

Full Stack Developer

058-601-0240 | nivsasi@gmail.com | Rehovot, Israel | linkedin.com/in/niv-sasi | github.com/nivsasi1

SUMMARY

Full Stack Developer with 3 years of building mission-critical, high-scale systems in the IDF with React, TypeScript, Node.js, and MongoDB — platforms serving thousands of daily users and managing hundreds of thousands of records. Experienced across the entire stack: database architecture, secure microservices, real-time data streaming, payment integration, and modular UI. Practical Software Engineering graduate, currently pursuing a B.Sc. in Computer Science.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript (ES6+), HTML5, CSS3, Material UI

Backend: Node.js, Express, REST APIs, Microservices, Apache Kafka, JWT, Session Management, Caching

Databases: MongoDB (Mongoose), schema design & data modeling

Languages & Paradigms: Python, OOP, Web Scraping & Data Extraction, Data Processing (CSV/JSON)

DevOps & Tools: Docker, OpenShift, Git/GitHub, monorepo workflows, Figma, Jira, ClickUp

Integrations: Payment Gateways (Stripe, Israeli PSPs), 3rd-party APIs, OSINT Automation

PROFESSIONAL EXPERIENCE

Full Stack Developer — IDF, Information Systems Department 2023 – 2026 • Designed and built high-scale operational platforms for logistics management and real-time personnel tracking, serving **thousands of active users daily** and managing **hundreds of thousands** of vehicle and history records. • Developed end-to-end features in a monorepo using React, Node.js, and MongoDB — from database architecture and API design to modular, reusable UI components.

- Architected and deployed scalable Node.js microservices in a **Top-Secret classified environment**, implementing JWT authentication, session management, and caching to optimize performance under load.
- Containerized services with Docker, orchestrated deployments on OpenShift clusters, and integrated Apache Kafka for secure, real-time data streaming across distributed networks.

Independent Software Developer — Freelance 2022 • Built a custom OSINT automation and data-extraction tool (web scraping, local file parsing) for a private investigation agency, significantly reducing manual intelligence-gathering time.

- Owned the full delivery cycle independently: requirements, architecture, implementation, and client hand-off.

PROJECTS

Lev HaTahbiv — Business Website 2025 • Designed and developed a responsive business website end-to-end, handling frontend, layout, and deployment, with a clean UI and mobile-first design.

Automated Content Pipeline 2024 • Engineered an end-to-end content-generation pipeline integrating Reddit APIs with Text-to-Speech AI models, automating subtitle generation and programmatic video editing — eliminating most manual production work.

EDUCATION

B.Sc. in Computer Science — The Open University of Israel Expected 2028 **Associate Degree, Practical Software Engineering — ORT College (90+)** 2021 – 2023
